

TYPE-DESCRIPTION

VENTIX QUICKFLOW allows emptying an IBC in shortest time with completely opened outlet-valve without prior opening the upper closure of the IBC.

VENTIX QUICKFLOW is made out of sintered hydrophobic and oleophobic ultra high molecular HDPE and avoids any underpressure in the IBC while discharge, because as much air can stream in as liquid flows out .

A collapsing of the IBC while discharge without opening its upper closure is avoided .

VENTIX QUICKFLOW is available in the closure-sizes S 70 x 6,
S 56 x 4 and G 2" fine-thread.
